

Kick off the clinical competency lifecycle with CredentialStream + Privilege

The availability of actionable and objective data to support privileging decisions increases the quality of care being delivered. Privilege automates the clinical competency lifecycle including the standardization of the delineation, request, recommendation, granting, monitoring, and evaluation of clinical privileges.

CredentialStream + Privilege

CredentialStream® includes everything you need to request, gather, and validate provider information and create a Source of Truth to serve downstream processes.

Privilege automates and standardizes the process of managing requests, recommendations, granting, monitoring and look-up of clinical privileges.

Privilege Highlights

Platform

- Automate privilege requests and conditions management
- Complete privilege request, review, and recommendation process online via the Hub
- Deliver real-time data availability to all stakeholders, including providers, reviewers, nurses, schedulers, etc.
- Support single, multi-facility, and enterprise privilege requests

Content

- Access a library of privilege forms
- Benefit from pre-built privilege and appointment workflows

Data

- Improve processes with access to Privilege and FPPE Insights and other benchmarked data

Who It's For

- Hospital/Health System Medical Staff Services
- Outpatient Credentialing/Privileging/Administration
- Clinical Leadership (CMO, VPMA, etc.)
- Quality Management
- Complete management of focused/initial monitoring (i.e. FPPE)

Why You'll Love It

- Library of continuously updated forms eliminates the need to conduct time-consuming research on new procedures and update privilege forms accordingly
- Procedure volume reporting
- Real-time data availability to all stakeholders
